

**Table 4**

Abnormalities of motor neurography (upper) and electromyography (lower) findings among 144 UNE cases.

<b>1. Motor Neurography</b>					
<b>Variables</b>	<b>Both normal from ADM and FDI n (%)</b>	<b>Abnormal only from ADM n (%)</b>	<b>Abnormal only from FDI n (%)</b>	<b>Both abnormal from ADM and FDI n (%)</b>	<b>Abnormal at least from one muscle =overall sensitivity n (%)</b>
MCV across-elbow (m/s)	22 (15.3)	7 (4.9)	4 (2.8)	111 (77.1)	122 (84.7)
MCV drop (m/s)	30 (20.8)	24 (16.7)	11 (7.6)	79 (54.9)	114 (79.2)
Conduction block (%)	111 (77.1)	5 (3.5)	16 (11.1)	12 (8.3)	33 (22.9)
CMAPa wrist (mV)	112 (77.8)	1 (0.7)	16 (11.1)	15 (10.4)	32 (22.2)
<b>2. Electromyography</b>					
<b>Recording muscle</b>	<b>Spontaneous activity at rest n (%)</b>	<b>Neurogenic recruitment at full effort n (%)</b>		<b>At least one abnormal parameters n (%)</b>	
FDI	36 (25)	46 (31.9)		49 (34.0)	
ADM	30 (20.8)	41 (28.5)		42 (29.2)	
FCU	9 (6.3)	18 (12.5)		19 (13.2)	

ADM: abductor digiti minimi muscle; FDI: first dorsal interosseous muscle; FCU: flexor carpi ulnaris muscle; MCV: motor conduction velocity; MCV drop: difference between MCV across-elbow vs. below elbow-wrist segments; CMAPa wrist: compound muscle action potential amplitude stimulating at wrist; Conduction block: percentage decrease of CMAP amplitude from below elbow to above elbow.
